

## RHEUMATOLOGY OVERVIEW

Rochella A Ostrowski, MD  
Assistant Professor of Medicine  
Loyola University Medical Center  
Edward Hines, Jr. VA Hospital

---

---

---

---

---

---

---

---

## What is Rheumatology?

- Medical science devoted to autoimmune diseases, particularly connective tissue disease, and certain musculoskeletal disorders
- “rheuma” – “a substance that flows”
- “rheumatism” – emphasis that arthritis could be a systemic disorder

---

---

---

---

---

---

---

---

## Rheumatology Classification

(shortened list)

- Systemic connective tissue disease
- Vasculitis
- Seronegative spondyloarthropathies
- Arthritis associated with infection
- Inflammatory Myopathy
- Rheumatic disorders associated with metabolic, endocrine, and hematologic disease

---

---

---

---

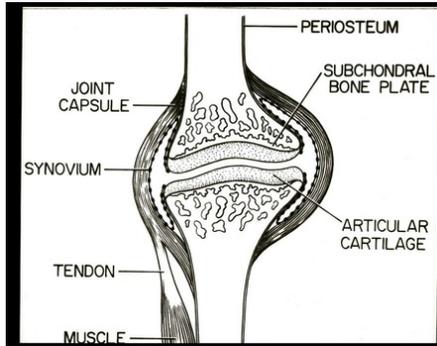

---

---

---

---

### Anatomy of a Joint

---

---

---

---

---

---

---

---

### Diagnostic Approach

- Articular vs non-articular
- Mechanical vs inflammatory
- Poly- vs oligo- vs monoarticular
- Acute vs chronic
- Localized vs systemic

---

---

---

---

---

---

---

---

### Inflammatory vs Non-inflammatory

- |  |  |
|--|--|
| <ul style="list-style-type: none"><li>• Erythema</li><li>• Warmth</li><li>• Pain</li><li>• Swelling</li><li>• Prolonged stiffness</li><li>• Systemic symptoms</li><li>• Laboratory abnormalities</li></ul> | <ul style="list-style-type: none"><li>• Mechanical pain (worse with activity)</li><li>• Improves with rest</li><li>• Stiffness after brief periods of rest (not prolonged)</li><li>• Absence of systemic signs</li></ul> |
|--|--|

---

---

---

---

---

---

---

---

## Diagnostic Approach

- Articular vs non-articular
- Mechanical vs inflammatory
- Poly- vs oligo- vs monoarticular
- Acute vs chronic
- Localized vs systemic

---

---

---

---

---

---

---

---

## Differential Diagnosis

- Monoarticular inflammatory
  - trauma, hemarthrosis, spondyloarthropathy
  - Septic arthritis, crystal induced
- Oligoarticular
  - Spondyloarthropathy, crystal induced, infection related
- Polyarticular
  - RA, SLE, crystal induced, infectious

---

---

---

---

---

---

---

---

## Physical Exam

- Inspection
- Palpation
- Maneuvers

---

---

---

---

---

---

---

---

## Rheum Diseases You Will Encounter

- Osteoarthritis
- Rheumatoid Arthritis
- Seronegative spondyloarthropathy
- Crystal induced arthritis
- Systemic lupus erythematosus and related connective tissue diseases
- Vasculitis
- Idiopathic Inflammatory Myopathy

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## OSTEOARTHRITIS

- Most common form of arthritis
- > 50 years of age
- Risk factors: age, obesity, occupation, history of trauma
- Most common sites: hands, feet, knees, hips, AC joints, and facet joints of the cervical and lumbosacral spine
- PAIN (mechanical type), stiffness (< 30 minutes), loss of function are presenting features
- No systemic involvement
- DIP/PIP involvement: spares the wrists (Heberden's/ Bouchard's)
- Non-inflammatory synovial fluid

---

---

---

---

---

---

---

---

### KNEE XRAYS

---

---

---

---

---

---

---

---

### RHEUMATOID ARTHRITIS

- Chronic (>6 wks), inflammatory
- Female > Male
- AM stiffness lasting at least 1 hr
- Soft- tissue swelling in at least 3 joint areas simultaneously  
Including wrist, MCP, or PIP joint  
Symmetric
- Swan neck/Boutonniere/ulnar deviation , erosive
- Rheumatoid nodules, extra-articular manifestations
- Positive rheumatoid factor , anti-CCP

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

RHEUMATOID ARTHRITIS

---

---

---

---

---

---

---

---

RHEUMATOID ARTHRITIS

---

---

---

---

---

---

---

---

Seronegative Spondyloarthropathy

- Seronegative
- Oligoarticular, assymmetric
- Chronic, inflammatory
- Sacroiliac involvement
- Enthesopathy
- Spinal involvement (inflammatory)
- HLA B27

---

---

---

---

---

---

---

---

## Seronegative Spondyloarthropathies

- Ankylosing spondylitis
- IBD associated arthropathy
- Psoriatic arthritis
- Reactive arthritis
- Undifferentiated spondyloarthropathy

---

---

---

---

---

---

---

---

## Dactylitis (Sausage Toes)

---

---

---

---

---

---

---

---

---

---

---

## GOUT

- Recurrent, episodic inflammatory arthritis
- Peak of pain: 24 hours; subside in 3-10 days
- 75 % of initial attacks in 1<sup>st</sup> MTP joint (podagra)
- Usually monoarticular, may be polyarticular
- Hyperuricemia may or may not be present
- Predisposing factors and associated conditions: surgery, medications (DIURETICS, low dose aspirin, cyclosporine A), alcohol ingestion, hypertension, renal insufficiency, hyperlipidemia

---

---

---

---

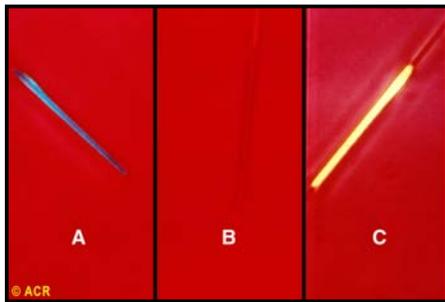

---

---

---

---

## Gout (diagnosis)

---

---

---

---

---

---

---

---

## Gout (podagra)

---

---

---

---

---

---

---

---

Tophaceous gout

---

---

---

---

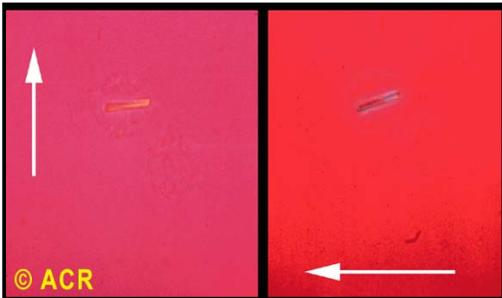

---

---

---

---

---

### Connective Tissue Diseases

- Systemic Lupus Erythematosus
- Sjögren's Syndrome – Sicca symptoms, +SSA/SSB
- Scleroderma
- Mixed Connective Tissue Disease – features of SLE and Scl, +RNP
- Overlap/ Undifferentiated Connective Tissue Disease

---

---

---

---

---

---

---

---

# Systemic Lupus Erythematosus

- Malar Rash
- Discoid Rash
- Serositis
- Oral ulcers
- Arthritis
- Photosensitivity
- Blood disorder
- Renal disorder
- ANA\*
- Immunologic abnormalities
  - (anti-Smith antibody, anti-double stranded DNA, anti-phospholipid antibodies)
- Neurologic symptoms

---

---

---

## Scleroderma

- Sclero = thickened, derma = skin
- Systemic : Limited or Diffuse
  - Limited = CREST (calcinosis, Raynaud's, Esophageal dysmotility, Sclerodactyly, Telangiectasias)
  - Diffuse = scleroderma proximal to MCPs
  - Pulmonary (ILD, pHTN), Renal involvement (renal crisis)
- Localized
- Overlap syndrome

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Vasculitis

- Inflammation & necrosis of blood vessel
- Perforation & hemorrhage, thrombosis, ischemia
- Large vessel
  - Takayasu, Giant Cell Arteritis
- Medium vessel
  - Polyarteritis nodosa, Kawasaki's
- Small
  - Henoch-Schonlein purpura, Wegener's granulomatosis, Microscopic polyangiitis, Churg-Strauss
  - ANCA –antineutrophil cytoplasmic antibodies\*

---

---

---

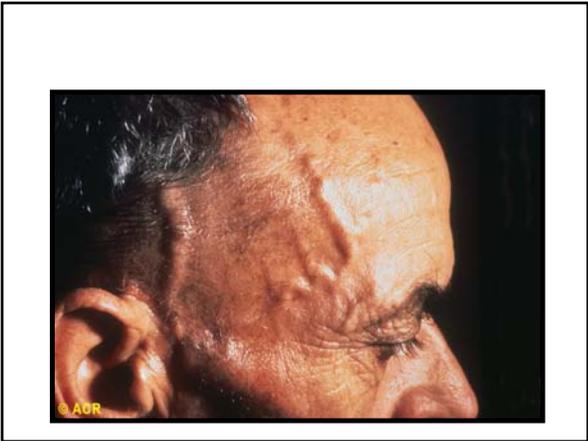

---

---

---

---

---

---

---

---

---

---

---

---

---

## Giant Cell Arteritis

- Patients >50 y/o
- Cranial symptoms—superficial HA, scalp tenderness, jaw claudication, blindness
- Polymyalgia rheumatica—pain and stiffness of proximal joints
- Fever, systemic symptoms
- Elevated ESR and CRP
- Diagnosis: Biopsy of temporal artery

---

---

---

---

---

---

---

---

## Idiopathic Inflammatory Myopathy

- Polymyositis
- Dermatomyositis
- Inclusion body myositis
  
- Proximal muscle weakness
  - (muscle pain not a typical symptom)
- Elevated muscle enzymes: CK, Aldolase, LDH
- Diagnosis: biopsy
- Lung involvement, increased risk for malignancy

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

### Case 1

- 67 y/o man with DM, HTN, hyperlipidemia, h/o arthritis (unclear what kind) and EF of 25%. He came with SOB and signs of CHF. Treated with IV Lasix -> he did well, SOB improved, lungs are now clear
- Pt is ready for discharge but now complains of severe right knee pain
- Examination: his right knee is flexed and looks much bigger than the left; you touch it and it feels warm; you try to move it but patient is in too much pain and you cannot flex or extend it further. Also, you look at the vital signs and the last temperature checked at 6 am showed 37.8 °C

---

---

---

---

---

---

---

---

### What are your thoughts?

1. Crystal induced arthritis?
2. Infection?
3. Acute trauma?
4. Hemorrhage?

---

---

---

---

---

---

---

---

### What test needs to be done?

ARTHROCENTESIS OF RIGHT KNEE

---

---

---

---

---

---

---

---

## Synovial Fluid Analysis

- Cell Count
- Crystal analysis
- Gram Stain and culture

	Normal	Non-inflammatory	Inflammatory	Septic
WBC	0-200	200-2000	2000 – 50 K	> 50 K
% PMN	25%	50%	75%	> 90%

---

---

---

---

---

---

---

---

## Case 2

- Scenario: Loyola Rheumatology Clinic
- CC: joint pain
- HPI: 29 y/o law student complains of bilateral hand pain x 6 months. Initially, she attributed the pain to the fact that she was taking too many notes in class. Involved joints: knuckles and right wrist. Taking Aleve OTC with minimal relief at this point. She denies swelling but has trouble to take her engagement ring off. Also with oral ulcers for the last 6 months
- ROS: fatigue, night sweats, weight loss, Raynaud's phenomenon since her college years; hair thinning; stiffness in the morning; dry eyes
- PE: +2 oral ulcers, malar rash, mild synovitis of right wrist, 2<sup>nd</sup> and 3<sup>rd</sup> PIPs bilaterally

---

---

---

---

---

---

---

---

## Case 3

- Scenario: Hines Arthritis Clinic
- CC: joint pain
- HPI: 29 y/o Hispanic man complains of pain in his joints x 7 years (since he left the military). Involved joints include: right shoulder, right knee, and left ankle. He states that pain is worse when he wakes up. He believes his left ankle has been swollen for years. Despite his joint symptoms, he continues to work out 5 x week. He feels that being active helps with his symptoms.
- ROS: low back pain since his military time; morning stiffness that lasts at least 2 hours
- PE: very mild swelling around his left ankle with decrease ROM in that joint

---

---

---

---

---

---

---

---

## Case 4

- Scenario: Loyola Gen Med Clinic
- CC: headaches
- HPI: 74 y/o male with 3 weeks headache. Has pain at temporal areas, which are also painful with combing hair. Has had low grade fevers for last 2 weeks and loss of energy. For the last two days, has noticed decreased vision in his right eye.
- PE: afebrile. Decreased temporal artery pulse. Temporal artery tender to touch.
