Labotatory Rules

1. Dr. Michael Dauzvardis is the Laboratory Coordinator. Supplies provided by the course are available from Dr. Dauzvardis.

2. Unauthorized personnel are not allowed in the laboratory without the permission of the faculty. Authorized persons include residents, graduate, medical students currently enrolled in the course, the staff associated with the course, and maintenance personnel.

3. When you have finished working on your cadaver, please ensure that the dissected region is damp and the cadaver is fully covered. Cadavers assigned to others may be uncovered only by permission of those students.

4. No cameras are allowed in the laboratory without special permission.

5. No cadaver tissue may be taken from the laboratory at any time.

6. Smoking, eating or drinking is not permitted in the laboratory.

7. At all times, please maintain a respectful attitude towards the cadavers, which have been donated for your benefit.

8. Please tidy up before you leave the laboratory. Do not leave paper towels or other pieces of trash on the floors or tables. Return tools to the appropriate cupboard drawers. Place used scalpel blades in the containers provided for this purpose (not on the dissecting tables, in the sink or in the plastic bag provided for that purpose and kept on your dissecting table).

9. Fluid must be drained from the dissecting table as it accumulates. Please wipe up any spills on the floor immediately, as this fluid makes the floor very slippery and hazardous.

10. Garments worn in the laboratory must be washed at frequent intervals. Shoes worn in the lab must adequately protect the top of the foot. Gloves and protective eyewear must be worn by all persons handling cadavers. These items may be purchased through the bookstore.

11. Report immediately any injuries incurred in the laboratory to a staff member, Student Health or the Emergency Room for the proper treatment.

12. No radios are allowed in the lab during class hours.

Thank you for your cooperation!
