# Patient Centered Medicine 2

#### BASIC SCREENING PHYSICAL EXAMINATION (Outline)

#### 1. WASH HANDS.

## PATIENT SITTING, FACING THE EXAMINER

- 2. Describe general appearance.
- 3. Inspect & palpate fingers (nails, joints) hands (palms), wrists, elbows, and arms (muscles, joints, and skin).
- 4. Test ROM in fingers, wrists, and elbows and test muscle strength in hand/fingers, wrists, forearms and arms.
- 5. Palpate radial pulses.
- 6. Check blood pressure in both arms (palpation 1 arm, auscultation both arms).
- 7. Inspect head and neck (configuration, scalp, and skin).
- 8. Inspect eyelids, conjunctivae and sclerae.
- 9. Test visual fields (II) and with pocket screener test visual acuity (II).
- 10. Test pupillary reaction to light (direct and consensual II, III).
- 11. Check extra-ocular muscles by examining for 6 cardinal positions of gaze (III, IV, VI).
- 12. Test light touch of face (V).
- 13. Ask patient to wrinkle forehead or raise both eyebrows and then to smile and show teeth (VII).
- 14. Test hearing (VIII).
- 15. Inspect mouth (teeth, gums, tongue, mucosa, ducts, tonsillar fossa, pharynx), ask patient to say "aah" and cough (X), and finally protrude his/her tongue (XII).
- 16. Ask patient to shrug shoulders against resistance (checking trapezius muscles) and laterally rotate his/her head against resistance (checking sternocleidomastoid muscles) cranial nerve XI.
- 17. Perform funduscopic examinations (right and left).
- 18. Inspect external ears (right and left).
- 19. Perform otoscopic examinations (right and left).
- 20. Inspect nose and nasal cavities (mucosa, septum, turbinates).
- 21. Inspect, palpate, and test shoulder ROM.
- 22. Check full ROM of neck including flexion, extension, lateral rotation, and head tilt.

## MOVE TO POSITION BEHIND PATIENT

- 23. Palpate the salivary glands and the head and neck lymph nodes.
- 24. Palpate trachea in the sternal notch.
- 25. While patient swallows, palpate for the thyroid gland.
- 26. Inspect the chest wall and skin. During patient's deep breathing, observe chest posteriorly for symmetry and check for respiratory excursion.
- 27. Inspect spine; percuss spine and costovertebral angle.
- 28. Percuss and palpate the posterior lung fields. Always begin at the apices and alternate bilaterally comparing right and left sides.
- 29. Auscultate the lung. Always begin at the apices and alternate bilaterally comparing right and left sides.

## MOVE TO FRONT OF PATIENT

- 30. (Female patient) Inspect breasts and nipples while patient's:
  - arms are relaxed at sides
  - arms are above head
  - hands are pressed against hips
  - hands are pressed against hips and patient is leaning forward
- 31. Palpate axillary nodes (against chest, laterally, anterior and posterior).

## ASK PATIENT TO LIE FLAT

32. Standing at patient's right, palpate both breasts.

#### **RAISE PATIENT TO 30°**

33. Identify and inspect internal and external jugular neck veins. Estimate Central Venous Pressure (CVP) by measuring for the maximum height of the internal jugular vein from the sternal angle.

#### LAY PATIENT FLAT - STAND ON PATIENT'S RIGHT SIDE

- 34. Palpate carotid arteries (one at a time).
- 35. Inspect precordium for parasternal and apical impulses. Inspect anterior chest wall and skin.
- 36. Palpate precordium for lifts, heaves, thrills and pulsations. Identify and measure the size of the PMI.
- 37. Palpate suprasternal notch for abnormal pulsations or thrills.
- 38. Auscultate carotid arteries.
- 39. Auscultate heart in five locations, using both bell and diaphragm.
- 40. Inspect abdomen and abdominal skin.
- 41. Auscultate abdomen.
- 42. Palpate abdomen superficially in all four quadrants.
- 43. Palpate abdomen deeply in all four quadrants.
- 44. Palpate for liver edge and spleen tip.
- 45. Percuss liver span in right MCL.
- 46. Palpate for kidneys.
- 47. With patient in right lateral decubitus position, palpate for spleen.

## STAND BESIDE PATIENT'S LEG, ADJUST DRAPING SHEET

- 48. Palpate femoral pulses.
- 49. Palpate superficial inguinal nodes, horizontal and vertical.
- 50. Auscultate femoral arteries.
- 51. Inspect, palpate, and test ROM in lower extremities muscles, joints, and skin including feet, ankles, knees and hips.
- 52. Check for edema in lower extremities.
- 53. Palpate dorsalis pedis and posterior tibial pulses.
- 54. Perform sensory examination in all four extremities (light touch, sharp/pain, vibration, and position sense).
- 55. Elicit deep tendon reflexes in all four extremities (biceps, triceps, brachioradialis, knees, and ankle).
- 56. Elicit plantar reflex bilaterally.
- 57. Ask patient to extend arms and check finger-to-nose-to-finger and fine finger movements. Check heel-to-knee-to-shin in both legs.

## ASK PATIENT TO STAND

- 58. Observe patient's gait and tandem walking. Perform Romberg test.
- 59. Inspect spine and evaluate ROM including flexion, extension, and lateral bending include lateral rotation.

### MALE PATIENT, WHILE STANDING

- 60. Inspect external genitalia and perineum.
- 61. Palpate penis: meatus, glans, and shaft.
- 62. Inspect scrotum.
- 63. Palpate scrotum and contents.

64. Palpate for inguinal hernias. Ask him to bend at the hips over the exam table with upper body resting across the table <u>or</u> (if patient is not mobile) ask patient to lie on left side with left leg extended and right leg flexed.

- 65. Inspect anus.
- 66. Perform digital rectal examination.
- 67. Retain stool sample for occult blood.
- 68. WASH HANDS

#### FEMALE PATIENT, ASK PATIENT TO ASSUME LITHOTOMY POSITION. DRAPE PATIENT APPROPRIATELY

- 60. Inspect external genitalia and perineum.
- 61. Insert speculum and inspect cervix.
- 62. Perform Pap smear.
- 63. Withdrawing speculum, inspect vaginal mucosa.
- 64. Perform bimanual exam of cervix, uterus, and adnexa.
- 65. Perform recto-vaginal examination.
- 66. Inspect anus.
- 67. Retain stool sample for occult blood.
- 68. WASH HANDS
